- 50% Hispanic (Dominican Republic, Puerto Rico)
- 35% Black or African-American (Jamaica, West Indies)
- 15% Other (Caucasian, Middle Eastern, South Asian, West African, etc.)

Montefiore

Program Goals & Objectives

- Trauma-informed care approaches in healthcare settings aim to acknowledge the role that trauma has played in patients' lives, shifting the question from
 - “*What is wrong with you?*”
 - to
 - “**What happened to you?**”

Four Objectives

- 1) Develop and administer online learning modules for nurses, front desk staff, and primary care providers (estimated 900 staff in 20 primary care practices).
- 2) Train 40 behavioral health staff to provide in-person trainings at the primary care sites.
- 3) Develop and implement universal ACEs screening (300,000 patients).
- 4) Develop marketing tools for our patient population about trauma informed care.

Doing this work well, while
staying well
